

Fasal Seva – Competitive Analysis Report

Updated: February 2026 | Product Status: LIVE on Google Play Store

1. INDIAN AGRITECH MARKET OVERVIEW

Metric	Value
Market size (2024)	~\$4.0–4.5 billion
Projected size (2030)	~\$24–34 billion
CAGR	~30–40%
Number of farmers in India	~150 million (86% are small/marginal, <2 hectares)
Smartphone penetration (rural)	~50–55% and growing rapidly
Key govt initiatives	Digital Agriculture Mission, eNAM, PM-KISAN, Agri-Stack

Key trends:

- Rapid smartphone + cheap data adoption in rural India (Jio effect)
- Government push for precision agriculture and digital farmer IDs
- Growing climate volatility increasing demand for real-time farm intelligence
- Shift from input-focused to data/intelligence-focused agritech
- Investor interest peaking: \$2B+ invested in Indian agritech (2019–2024)
- Most solutions still target large/commercial farms or serve as B2B enterprise tools – **massive gap for affordable smallholder-focused solutions**

2. COMPETITOR PROFILES

2.1 DeHaat

Dimension	Details
Core Product	Full-stack agri platform: farm inputs (seeds, fertilizers, pesticides), advisory, credit, and market linkage for crop sales
Pricing	Free app; monetizes via input sales margins and market commissions
Target	Small/medium farmers in Eastern India (Bihar, UP, Jharkhand, Odisha)
Hardware	Software-only (no sensors or devices)
Key Features	Input delivery to doorstep, crop advisory via call center, credit facilitation, output procurement
Funding	~\$350M+ raised (Series E, 2022); investors include Sofina, Prosus, RTP Global
Scale	2M+ farmers, 10,000+ micro-entrepreneurs
Weaknesses	No precision agriculture / sensor capability; advisory is generic, not data-driven from field; no real-time monitoring; supply-chain focused, not farm-intelligence

	focused
--	---------

2.2 AgroStar

Dimension	Details
Core Product	Farm advisory platform + agri-input e-commerce + market linkages (Kimaye fresh produce brand)
Pricing	Free advisory; revenue from input product sales and produce exports
Target	12M+ farmers across 12 states; also export markets (Kimaye)
Hardware	Software-only
Key Features	Personalized crop advisory (15M+ interactions), 200+ agri-input products, 10,000+ retail stores (omnichannel), global market linkages
Funding	~\$100M+ raised; \$30M recent round for AI + omnichannel expansion
Scale	12M+ farmers, largest advisory platform in Asia
Weaknesses	No on-farm sensing or precision agriculture; advisory is reactive (farmer asks questions); no real-time field monitoring; focused on input commerce rather than farm intelligence

2.3 Fasal (the company)

Dimension	Details
Core Product	Smart irrigation & fertigation automation systems with soil sensors and weather stations
Pricing	Hardware purchase model; FasalJet systems likely ₹25,000–₹1,00,000+ depending on farm size and configuration
Target	Commercial/progressive farmers with drip irrigation; horticulture-focused
Hardware	Yes – soil moisture sensors, temperature sensors, weather stations, irrigation controllers, solenoid valves, fertigation injectors
Key Features	Irrigation automation (FasalJet), fertigation automation (FasalJet Pro), soil moisture monitoring, weather stations, mobile app control
Funding	~\$20M+ raised (Omnivore, Wavemaker, 3one4)
Scale	Thousands of farms; claims 52 billion liters water saved
Weaknesses	Expensive – targets commercial farms, not small/marginal farmers; no AI voice interface; no satellite analytics; no crop disease detection; limited to irrigation automation; no multilingual voice support

2.4 CropIn

Dimension	Details
-----------	---------

Core Product	Enterprise SaaS platform for agribusinesses – farm digitization, satellite monitoring, predictive analytics
Pricing	Enterprise SaaS subscriptions (B2B); not farmer-facing
Target	Agribusinesses, banks, insurers, governments, food companies (NOT individual farmers)
Hardware	Software-only (satellite + AI)
Key Features	Computed 1B+ acres globally; satellite-based crop monitoring; predictive yield models; EUDR compliance; climate risk modeling; "Cropin Cloud" platform
Funding	~\$45M+ raised; backed by Google, ABC World Asia, Chiratae
Scale	250+ enterprise clients across 56 countries
Weaknesses	Not farmer-facing at all – serves enterprises only; no direct farmer tools; no field-level sensors; no voice/vernacular interface; no smallholder affordability story; no hardware component

2.5 Plantix

Dimension	Details
Core Product	AI-powered crop disease diagnosis app – take a photo, get diagnosis + treatment
Pricing	Free app
Target	Smallholder farmers globally (strong India presence)
Hardware	Software-only (phone camera)
Key Features	Photo-based crop disease diagnosis, treatment recommendations, crop disease library, community expert advice, 100M+ crop questions answered
Funding	~\$7M raised (Germany-based PEAT GmbH)
Scale	Most downloaded agri-tech app worldwide; millions of users
Weaknesses	Only does disease diagnosis – no soil monitoring, no irrigation guidance, no weather/satellite analytics, no real-time field monitoring, no hardware sensing, no holistic farm management, reactive only (problem must already be visible)

2.6 Kisan Network

Dimension	Details
Core Product	Direct farmer-to-buyer marketplace for crop sales; eliminates middlemen
Pricing	Commission on transactions
Target	Farmers seeking better crop prices; commodity buyers

Hardware	Software-only
Key Features	Direct market access, price transparency, logistics support
Funding	~\$4M raised
Scale	Operating in Rajasthan and a few other states
Weaknesses	Purely output/market side – no farm management, no advisory, no monitoring, no sensors; limited geographic reach; small scale

2.7 Ninjacart

Dimension	Details
Core Product	B2B fresh produce supply chain – connects farmers to retailers/restaurants
Pricing	Commission/margin on produce logistics
Target	Farmers (supply side) and retailers/restaurants/kiranas (demand side)
Hardware	Software + logistics infrastructure (cold chain, warehouses)
Key Features	AI-powered demand forecasting, quality grading, same-day delivery, cold chain logistics
Funding	~\$300M+ raised; backed by Flipkart, Tiger Global, Accel
Scale	200,000+ farmers, 100,000+ retailers, multiple cities
Weaknesses	Purely supply-chain/logistics – no farm-level intelligence, no precision agriculture, no advisory, no sensors; farmer is just a supplier; doesn't help farmers grow better crops

2.8 BharatAgri

Dimension	Details
Core Product	Personalized crop schedule/calendar app with expert advisory for smallholders
Pricing	Freemium; premium subscription for personalized schedules (~₹500–1,000/season)
Target	Small/medium Indian farmers
Hardware	Software-only
Key Features	Crop-specific daily schedule (when to water, fertilize, spray), expert consultations, weather-based alerts, input purchase recommendations
Funding	~\$6M raised
Scale	3M+ app downloads

Weaknesses	No real-time field data – schedules are generic/model-based, not sensor-driven; no actual soil measurement; no satellite imagery; no hardware; advice is calendar-based, not condition-based; no voice interface
-------------------	---

3. COMPETITOR MATRIX

Dimension	DeHaat	AgroStar	Fasal (co.)	CropIn	Plantix	Kisan Network	Ninjacar
Primary Focus	Input supply + market	Advisory + inputs	Irrigation automation	Enterprise SaaS	Disease diagnosis	Market linkage	Supply chain
Hardware	□	□	□ (expensive)	□	□	□	□
Soil Sensors	□	□	□ (moisture, temp)	□	□	□	□
Satellite Analytics	□	□	□	□ (enterprise)	□	□	□
AI Voice Interface	□	□	□	□	□	□	□
Smart Irrigation	□	□	□ (basic)	□	□	□	□
Field Mapping	□	□	□	□	□	□	□
AR Visualization	□	□	□	□	□	□	□
Weather Intelligence	□	□	□	□	□	□	□
Target Farmer	Small	Small-Medium	Commercial	Enterprise	Small	Small	Small-Medium
Pricing	Free app	Free app	□25K+	Enterprise SaaS	Free app	Free app	N/A

Multilingual	Limited	Limited	No	No	Limited	No	No
Funding	\$350M+	\$100M+	\$20M+	\$45M+	\$7M	\$4M	\$300M+

4. MARKET MAP

By Value Chain Position

By Feature Depth vs Accessibility

5. FASAL SEVA'S ACTUAL POSITIONING (AS OF FEB 2026)

Product Reality – LIVE on Play Store

App: com.fasalseva.app (Google Play Store) | **Website:** fasalseva.in **Users:** 64 real farmers | **Funding:** ₹0 raised | **Price:** Free for all Indian farmers

Actual Features (Live in Production)

Feature	Description	Status
Sevak Live	Full-duplex AI voice calls with farm data context. Powered by Gemini 3.0 Native Audio. Hindi, English, Tamil.	▣ LIVE
Satellite Monitoring	Sentinel-2 imagery, 5 indices (NDVI, NDWI, NDRE, SAVI, MSI), color-coded heatmaps, updated every 3-5 days	▣ LIVE
Field Mapping	Tap-to-draw or walk mode, 20+ crops, 7 soil types, 5 irrigation types, downloadable PDF reports	▣ LIVE
Smart Irrigation Engine	FAO-56 Penman-Monteith, crop-specific Kc coefficients, VRA zone prescriptions	▣ LIVE
Weather Intelligence	14-day GPS-based forecasts, storm alerts, spray planning	▣ LIVE
AR Zone Explorer	Augmented reality satellite overlay on physical field	▣ LIVE
WhatsApp OTP Login	SIM auto-detection for frictionless onboarding	▣ LIVE
Dark Mode + Multilingual UI	Hindi, English, Tamil; OTA updates	▣ LIVE
Fasal Seva Mini IoT Sensor	BT 5.0, 50m range, IP67, rechargeable	▣ TESTING (2 farmers only)

What This Means Competitively

Fasal Seva has already shipped more precision agriculture features for smallholders than any competitor – for free, with zero funding.

The feature set is significantly stronger than what well-funded competitors offer:

- **More satellite indices than CropIn** offers to individual farmers (5 vs typically 1-2)
- **FAO-56 irrigation engine** that Fasal (co.) charges ₹25K+ to access
- **Full-duplex AI voice calls** – no competitor has anything close
- **AR field visualization** – entirely unique in Indian agritech
- **Walk mode field mapping** – no competitor offers this for smallholders

The Gap That Still Matters

The key unsolved challenges are not technical but commercial:

1. **Revenue model:** App is free. Hardware isn't ready to scale. How does Fasal Seva make money?
2. **Hardware scaling:** IoT sensor only with 2 test farmers. Manufacturing, distribution, and unit economics are unproven.
3. **User growth:** 64 users is proof of concept, not product-market fit. Need 1,000+ for meaningful signal.
4. **Funding:** Zero raised. Need capital to scale hardware and distribution.

6. COMPETITIVE ADVANTAGES – Where Fasal Seva Wins

vs DeHaat / AgroStar (input commerce platforms)

"They sell products. We tell farmers exactly what their soil needs, when – for free, by voice."

- Their advisory is generic; Fasal Seva's is satellite-driven and field-specific.
- Fasal Seva's voice AI (Sevak Live) is a generation ahead of any call-center advisory.

vs Fasal (the company) (expensive hardware)

"We've shipped more features for free than they charge ₹25K+ for."

- Fasal co. targets commercial farms. Fasal Seva serves the 86% they ignore.
- FAO-56 Penman-Monteith engine, 5 satellite indices, AI voice – all free in Fasal Seva.
- Fasal co. has no voice interface, no AR, no field mapping with walk mode.

vs CropIn (enterprise SaaS)

"We bring enterprise-grade satellite analytics directly to the farmer's pocket – with 5 indices, not just NDVI."

- CropIn serves agribusinesses at enterprise pricing. Fasal Seva gives individual farmers more indices for free.

vs Plantix (disease diagnosis)

"We catch problems BEFORE they become visible – with satellite monitoring across 5 spectral indices."

- Plantix is reactive (photo after disease appears). Fasal Seva monitors proactively every 3-5 days.

vs BharatAgri (crop calendar)

"Our recommendations come from FAO-56 science and satellite data, not a generic calendar."

- BharatAgri provides model-based schedules. Fasal Seva provides real-time, science-driven, field-specific guidance.

7. COMPETITIVE RISKS

Risk	Details	Mitigation
Revenue model unclear	App is free. Hardware not ready to scale. No revenue yet.	Explore freemium, B2B data licensing, government contracts, hardware subscription models
Distribution	DeHaat (2M farmers), AgroStar (12M) have massive farmer networks	Feature superiority + free pricing can drive organic growth; partner with FPOs
Funding gap	Competitors have \$4M-\$350M; Fasal Seva has ₹0	Strong product traction with zero funding is a compelling investor narrative
Hardware scaling	IoT sensor tested with only 2 farmers; manufacturing and distribution unproven	Focus on software-first growth; hardware as premium add-on when ready

User growth	64 users – early but small	Organic growth from Play Store; FPO partnerships; government pilot programs
Fasal (co.) moving downmarket	Could launch cheaper product for smallholders	Fasal Seva already has more features for free; voice AI + AR are hard to replicate
Big tech entry	Google, Microsoft, Jio could enter	First-mover with live product; deep feature set; vernacular voice moat

8. POSITIONING STRATEGY

The One-Liner

"Fasal Seva is a free, voice-first precision farming app – live on Play Store – that gives India's 120 million small farmers satellite intelligence, FAO-56 irrigation science, and AI advisory in Hindi, English, and Tamil."

The Pitch Framework

Problem: India's 120M+ small farmers make decisions blind – no soil data, no satellite insights, generic advice. Existing solutions are either software-only (no real data) or hardware costing ₹25K+ (unaffordable).

Solution: Fasal Seva = Free mobile app with full-duplex AI voice calls (Sevak Live, powered by Gemini 3.0), 5-index satellite monitoring, FAO-56 smart irrigation, AR field visualization, and walk-mode field mapping. IoT soil sensor in testing.

Traction (as of Feb 2026):

- Live on Google Play Store (com.fasalseva.app)
- 64 real users
- Zero funding raised – entirely bootstrapped
- IoT sensor piloting with 2 farmers
- Website: fasalseva.in

Why Now:

- Rural smartphone penetration crossed 50%
- Gemini 3.0 enables real-time multilingual voice AI
- Free satellite data (Sentinel-2) makes 5-index monitoring viable
- Government Digital Agriculture Mission creating policy tailwind
- Climate change making precision irrigation urgent

Moats:

1. **Feature depth at zero price** – no competitor matches the feature set, let alone for free
2. **Voice-first AI (Sevak Live)** – full-duplex conversations, not chatbots
3. **5 satellite indices** – more than enterprise solutions offer to individual farmers
4. **AR visualization** – entirely unique in agritech
5. **Data network effects** – every user's field data improves the system for all

Competitive Moat Diagram:

Fasal Seva occupies the strongest quadrant: deep features + free/accessible.

9. KEY TAKEAWAYS

1. **Lead with the product:** "We've already shipped what competitors with \$350M couldn't – a complete precision farming ecosystem, for free."
2. **64 users with zero funding** is the story. It proves the product has real pull.
3. **Sevak Live is the killer feature:** Full-duplex AI voice calls in Hindi/English/Tamil, powered by Gemini 3.0. No competitor has anything close.
4. **The monetization question is real:** The app is free. The hardware isn't ready. Investors will want to see a path to revenue.
5. **Hardware is the next frontier:** The Fasal Seva Mini IoT sensor (BT 5.0, IP67) is testing with 2 farmers. Scaling this is the key unlock for the next phase.
6. **The 86% story still holds:** 86% of Indian farmers are small/marginal. No precision agriculture solution serves them at this depth. Fasal Seva is the first.

Report updated February 2026. Fasal Seva product data from Google Play Store listing (com.fasalseva.app). Competitor data from company websites, publicly available funding data, and market research reports.
