Target Market (Farmers)

 3,499

IoT Device MRP

63%

Hardware Margin

The Problem

India has 120M+ small & medium farmers. Most lack access to:

- **Crop health data** — they can't afford satellite/drone monitoring
- **Expert advice** — government extension officers cover 1 per 1,000+ farmers
- **Soil data** — no real-time info on moisture, nutrients, or irrigation timing
- **Technology** — existing agri-tech solutions are expensive, English-only, and B2B focused

Result: Crop losses, water waste, low yields, and farmer debt — contributing to India's agrarian crisis.

Our Solution

Fasal Seva is a mobile app + IoT hardware platform that gives every farmer access to smart farming technology — **for free**.

Feature	What It Does
 Satellite Monitoring	5 vegetation indices (NDVI, NDWI, NDRE, SAVI, EVI) — see crop health from space
 Sevak AI	Voice-based AI assistant that speaks Hindi — ask any farming question, anytime
 IoT Sensors	Real-time soil moisture, temperature & nutrient data via affordable device ( 3,499)
 Smart Irrigation	AI-powered scheduling — tells farmers exactly when and how much to water
 Weather Alerts	Hyper-local forecasts and disaster warnings
 Farm Dashboard	All data in one place — simple enough for a first-time smartphone user

Key Differentiator: No competitor combines Voice AI (Hindi) + Satellite + IoT at this price point. Existing players are either B2B, English-only, expensive, or missing IoT/Voice altogether.

Business Model

Revenue Stream	Details
IoT Hardware	Sensor device — BOM  1,000, MRP  3,499 (63% gross margin)

Freemium App	Free: satellite + AI chat. Premium: advanced analytics, unlimited sensor slots
B2B Data	Anonymized crop/soil data for agri-input companies, insurance firms, government
Marketplace	Curated seeds, fertilizers, equipment (commission-based)

Market Opportunity

Segment	Size
India Agri-Tech Market	\$2.9B — growing to \$7.2B by 2028
Addressable Farmers	120M+ small/medium farmers with smartphones
Precision Agriculture (India)	\$1.2B by 2027 (CAGR 12.4%)

Traction & Milestones

- ☐ Live on Google Play Store — fully functional app
- ☐ 72+ organic users via WhatsApp group outreach (zero ad spend)
- ☐ Satellite monitoring with 5 vegetation indices operational
- ☐ Sevak AI voice assistant working in Hindi
- ☐ IoT sensor prototype designed (BOM ☐1,000)
- ☐ Target: 500 users by April 2026, 5,000 by September 2026
- ☐ Pilot location: Maharashtra (Nashik) — India's agri-tech hub

Competitive Landscape

Competitor	What They Do	Why We Win
DeHaat	B2B marketplace	No satellite, no AI, no IoT
CropIn	B2B SaaS for enterprises	Expensive, not for small farmers
Satyukt (Sat2Farm)	B2B satellite analytics	No voice AI, no IoT, paid
Fasal (sensor co.)	IoT for large farms	☐25K+ devices, no satellite
Fasal Seva	App + AI + Satellite + IoT	Free, Hindi voice, ☐3,499 device

Team

- **Pranshu Chourasia** — Founder & CEO, B.Tech student, full-stack developer
- Building with a team of engineers passionate about solving real problems for Indian farmers

Funding Roadmap

Stage	Amount	Use
Pre-Seed (Now)	₹25–50 Lakh	Hardware prototyping, user acquisition, pilot in Maharashtra
Seed (6-9 months)	₹1–3 Crore	Scale to 10K users, manufacturing, team hiring

Target Investors: Omnivore Partners, Ankur Capital, Avaana Capital, Agfunder, NABARD innovation fund
