

Fasal Seva – Investor Pitch Deck

Pre-Seed Round | February 2026

One-Liner

"We built the most comprehensive precision farming app in India – for free, with zero funding – and 64 real farmers are already using it."

Elevator Pitch (30 seconds)

120 million small Indian farmers lose 20-30% of their yield because they can't afford or understand precision agriculture. We built Fasal Seva – a free app with full-duplex AI voice calls, 5-index satellite monitoring, and FAO-56 irrigation science. It's live on Play Store with 64 real users. We raised zero rupees. Competitors with \$20M in funding don't have half our features. We're raising pre-seed to scale to 500+ farmers and prove our revenue model.

Slide-by-Slide Structure

Slide 1: TRACTION – LEAD WITH WHAT'S REAL

Title: "Live product. Real farmers. Zero funding."

Metric	Value
App	Live on Google Play Store (com.fasalseva.app)
Users	64 real farmers
Funding Raised	₹0
Features Shipped	9 major modules (see next slide)
Hardware	IoT sensor piloting with 2 farmers
Languages	Hindi, English, Tamil
Website	fasalseva.in

Why this matters: Most agritech startups raise millions before shipping anything. We shipped everything before raising anything.

Slide 2: THE PRODUCT – WHAT'S ACTUALLY LIVE

Title: "More features than \$20M-funded competitors. Price: Free."

Feature	Description	Competitor Comparison
Sevak Live	Full-duplex AI voice calls with farm data context (Gemini 3.0 Native Audio). Hindi, English, Tamil.	No competitor has AI voice calls for farmers

Satellite Monitoring	Sentinel-2, 5 indices (NDVI, NDWI, NDRE, SAVI, MSI), color-coded heatmaps, updated every 3-5 days	CropIn (\$45M raised) offers fewer indices to enterprises only
Smart Irrigation Engine	FAO-56 Penman-Monteith, crop-specific Kc, VRA zone prescriptions	Fasal (co., \$20M raised) charges ₹25K+ for similar irrigation science
Field Mapping	Tap-to-draw or walk mode, 20+ crops, 7 soil types, 5 irrigation types, PDF reports	No competitor offers walk-mode mapping for smallholders
Weather Intelligence	14-day GPS forecasts, storm alerts, spray planning	Basic weather exists in some apps; spray planning is unique
AR Zone Explorer	Augmented reality satellite overlay on physical field	Entirely unique in Indian agritech
WhatsApp OTP Login	SIM auto-detection for frictionless onboarding	Most apps still use email/phone OTP
Fasal Seva Mini	BT 5.0 IoT sensor, 50m range, IP67, rechargeable	₹ Testing with 2 farmers (not scaled yet)

Slide 3: THE PROBLEM

Title: "120 million farmers. Blind decisions. ₹1.5 lakh crore in losses."

- **120M+ small/marginal farmers** (86% of Indian farms) make irrigation, fertilizer, and harvest decisions by intuition
- Existing precision ag tools cost ₹25,000-50,000+ and speak English
- Government Soil Health Cards: tested once in 2 years, arrive months late, in English
- **70% of target farmers** are semi-literate – text-based apps fail them
- **Result:** 20-30% preventable yield loss, ₹1.5 lakh crore/year

The gap: No solution combines satellite intelligence + AI voice + irrigation science for small farmers at an accessible price.

Slide 4: THE INSIGHT

Title: "The farmer doesn't need a dashboard. He needs a conversation."

- Farmers already call each other for advice – voice is the natural interface
 - Semi-literate ≠ unintelligent. They have deep domain knowledge, just no data.
 - The killer UX: open app → talk to Sevak Live → get specific advice about your field, in your language
 - **Gemini 3.0 Native Audio** makes full-duplex multilingual voice conversations possible for the first time
 - This was technically impossible 2 years ago. We're among the first to deploy it.
-

Slide 5: HOW IT WORKS

Title: "Voice → Satellite → Science → Action"

1. **Farmer opens app** → WhatsApp OTP login (10 seconds)
2. **Maps their field** → tap-to-draw or walk the boundary (2 minutes)
3. **Asks Sevak Live** (in Hindi): *"Meri fasal ka kya haal hai?"*
4. **AI responds** with farm-specific advice, referencing:
 - Satellite imagery (5 indices, updated every 3-5 days)
 - FAO-56 irrigation calculations for their specific crop
 - 14-day weather forecast for their GPS location
 - IoT sensor data (if Fasal Seva Mini is installed)
5. **Farmer gets specific action:** "Irrigate Zone B tomorrow morning. Nitrogen levels in Zone A are low – apply 20kg urea."
6. **AR Zone Explorer** lets them see satellite overlay on their actual field through phone camera

Slide 6: COMPETITIVE LANDSCAPE

Title: "We occupy the strongest quadrant."

Key comparison:

	Fasal (co.)	CropIn	BharatAgri	Fasal Seva
Price	₹25,000+	Enterprise SaaS	₹500/season	Free
Satellite indices	0	1-2 (B2B)	0	5
AI voice calls	□	□	□	□ Full-duplex
FAO-56 irrigation	Basic	□	□	□
AR visualization	□	□	□	□
Funding raised	\$20M+	\$45M+	\$6M	\$0

Slide 7: MARKET OPPORTUNITY

Title: "1% of India's farmers = ₹600 crore opportunity"

- **TAM:** 120M+ small/marginal farmers × potential ₹1,000-3,000/year value = ₹12,000-36,000 crore
- **SAM:** 50M farmers with smartphones in serviceable states = ₹5,000-15,000 crore
- **SOM (5 years):** 1% penetration = 500K farmers

Revenue potential at 500K users:

- Freemium (15% convert × ₹1,000/year): ₹75 crore ARR
- IoT hardware (100K units × ₹4,000): ₹40 crore
- B2B data licensing: ₹10-20 crore
- **Total addressable at scale: ₹100+ crore ARR**

Indian agritech market: ~\$4-5B today → \$30-35B by 2030.

Slide 8: BUSINESS MODEL (HONEST)

Title: "We know how to build. Now we need to learn how to monetize."

Current state: App is free. No revenue. This is intentional – we prioritized product and user validation over premature monetization.

Revenue model to test:

Stream	Timeline	Notes
Freemium subscription (₹49-99/month)	Testing in 30-60 days	Premium: daily satellite, unlimited voice, analytics
IoT sensor hardware (₹3,000-5,000)	When manufacturing scales (3-6 months)	Currently 2 pilot units
B2B data licensing	6-12 months	Aggregated crop/soil data for insurers, input cos
Government contracts	6-12 months	Digital Agriculture Mission alignment

We're transparent: Monetization is unproven. But we've demonstrated the hardest part – building a product farmers actually use.

Slide 9: TRACTION & METRICS

Title: "64 farmers chose us. With zero marketing."

Metric	Value	What It Means
Play Store installs	64	Organic discovery – no paid acquisition
Funding raised	₹0	Extreme capital efficiency
IoT hardware pilots	2 farmers	Proof of hardware concept
Features shipped	9 major modules	Product velocity without funding
Languages	3 (Hindi, English, Tamil)	Multilingual from day 1
Satellite indices	5 (more than enterprise competitors)	Technical depth

Next milestones:

- 200+ users (90 days)
- 500+ users (6 months)
- 10+ FPO partnerships (6 months)
- Freemium conversion data (60 days)
- 20+ IoT sensors deployed (6 months)

Slide 10: WHY NOW

Title: "Five forces converging."

1. **Gemini 3.0 Native Audio** – full-duplex multilingual voice AI was impossible 2 years ago. Now it's our core feature.
2. **Rural smartphones crossed 50%** – 350M+ rural smartphone users. Farmers are on WhatsApp and YouTube.
3. **Free satellite data** – Sentinel-2 provides 10m resolution imagery globally. We process 5 indices from it.
4. **Government tailwind** – Digital Agriculture Mission (₹2,817 Cr), AgriStack, 10,000 FPO target.
5. **Climate urgency** – Erratic monsoons, depleting water tables. Precision irrigation is survival, not luxury.

Slide 11: THE ASK

Title: "₹25-50 lakhs to go from 64 to 500 farmers and prove revenue."

Raising: ₹25-50 lakhs (pre-seed)

Use of funds:

Item	Amount	Purpose
IoT sensor batch (50-100 units)	₹5-10L	Scale hardware pilot from 2 → 50+ farmers
Cloud/API costs	₹2-3L	Gemini 3.0 + satellite processing for 500+ users
On-ground operations	₹5-7L	FPO partnerships, KVK demos, farmer meetings
Part-time hires	₹5-8L	Field coordinator + content creator (6 months)
Working capital	₹5-10L	Buffer

Milestones this unlocks:

- 500+ active users
- 50+ IoT sensors deployed
- 5+ FPO partnerships
- Freemium conversion data
- Seed-round ready metrics

Slide 12: VISION

Title: "Meri zameen se meri baat – My land, my conversation"

Where we're going:

- **Year 1:** 5,000 farmers, revenue model proven, 10+ states
- **Year 3:** 100,000+ farmers, IoT sensor at scale, B2B data revenue
- **Year 5:** 500,000+ farmers, the data backbone of Indian smallholder agriculture

The ultimate moat: Every farmer on Fasal Seva generates field-level data that makes the system smarter for every other farmer. At scale, this becomes the most granular agricultural intelligence dataset in India – valuable to insurers, input companies, governments, and climate researchers.

We didn't start with funding. We started with farmers. That's the foundation everything else is built on.

□ Anticipated Investor Questions

Q: "You have 64 users. How do you know this isn't just early adopter noise?"

A: Fair question. 64 is early. But these are real farmers who found us organically on Play Store – no marketing, no incentives. Our 90-day plan is specifically designed to answer this: get to 500+ users, measure retention, and test willingness to pay. That's what the pre-seed is for.

Q: "The app is free. How do you make money?"

A: We're testing three models: freemium subscription (₹49-99/month for premium features), IoT hardware sales (when manufacturing scales), and B2B data licensing. We intentionally kept it free to maximize initial adoption. Monetization testing starts in 30-60 days. We're transparent that this is unproven.

Q: "Why should I invest at pre-revenue?"

A: Because the product risk is eliminated. We've built something that competitors with \$20M+ couldn't. What remains is commercial risk – can we grow users and monetize? That's a much more solvable problem, and it's exactly what this round funds.

Q: "What about the IoT sensor? Is that your real product?"

A: The sensor (Fasal Seva Mini) is a powerful add-on, but the app is the core product. 62 of our 64 users don't have sensors – they're using satellite monitoring, voice AI, and field mapping. Hardware is the premium layer for deeper precision. We'll scale it once manufacturing and unit economics are proven.

Q: "Gemini 3.0 API costs – can you afford voice AI at scale?"

A: We need to measure this precisely (it's a week-1 priority). Our plan: free tier gets 5 voice calls/day, premium gets unlimited. For common queries ("should I irrigate?"), we can use cheaper models or rule-based logic. Gemini is reserved for complex, contextual conversations.

Q: "What's your moat? Can a funded competitor copy this in 6 months?"

A: Our moat has four layers: (1) Feature depth – 9 modules already live, each deeply built; (2) Voice AI quality – Sevak Live's full-duplex conversations require deep integration with farm data, not just an API call; (3) Free pricing – competitors have business models that require charging, we can stay free longer; (4) Farmer data network effects – every field mapped, every satellite analysis, every voice conversation makes the system smarter.

Q: "Why haven't you raised before now?"

A: We wanted to prove we could build first. Too many agritech startups raise on slides and struggle to ship. We shipped on zero budget. Now we need capital for things you can't bootstrap: hardware manufacturing, on-ground distribution, and sustained growth.

Q: "What's your background? Do you understand farming?"

A: [Founder to personalize]. We've built deep agricultural domain knowledge into the product – FA0-56 irrigation science, 20+ crop profiles, 7 soil types. We're actively looking for an agri-domain co-founder or advisor to strengthen this.

▣ **Presentation Tips**

1. **Lead with traction** – "64 users, zero funding" is your strongest opening. Don't bury it.
2. **Show the app** – Pull it up on Play Store live. Let investors see it's real.
3. **Be honest about what's not working** – "We don't have a revenue model yet" is strength, not weakness, when paired with "but we have a plan to test one."
4. **The feature comparison slide is your killer** – Show the table of what you have vs. what \$20M-funded competitors have. Let the gap speak.
5. **Don't oversell hardware** – 2 sensor pilots is honest. Say it. "We're testing, not scaling."
6. **Know your numbers** – 64 users, 5 indices, FA0-56, 2 sensor pilots, 3 languages, ₹0 raised. Every number should be instant.
7. **End with the farmer** – "We didn't start with funding. We started with farmers."

Deck prepared February 2026. All metrics are real and current as of date. App: com.fasalseva.app | Web: fasalseva.in
